

SECTION B

Read Figures 1 to 4 and extracts (A and B) before answering Question 6.

Answer ALL Questions 6(a) to 6(e) and EITHER Question 6(f) OR Question 6(g).

You are advised to spend 1 hour and 5 minutes on this section.

Question 6

UK inflation and economic growth

Figure 1: UK inflation rate as measured by annual percentage changes in the Consumer Price Index (CPI), January 2014 to January 2018

(Source: www.bankofengland.co.uk/publications/Pages/inflationreport/2017/aug.aspx)

Figure 2: Selected changes to the CPI basket of goods and services, 2017

IN	OUT
Non-dairy milk	Apple cider
Jigsaw puzzles	Menthol cigarettes
Child scooters	Child swings
Cycling helmets	Basic mobile phones

Extract A

Rising inflation

After January 2017, the inflation rate, as measured by the Consumer Price Index (CPI), in the UK has exceeded the Bank of England's 2% target. Sharp increases in food prices as a result of the fall in the exchange rate of the pound have contributed to rising inflation. Between January and September 2017, food prices have increased by 3.5 percentage points. 5

The Office for National Statistics (ONS) has identified that the rapid increase in food prices affected people on low fixed incomes the most. It leaves them with very little money to spend on relatively more expensive items. Moreover, the Bank of England has observed a rise in the size of personal debt relative to income. In order to maintain their standard of living, many consumers on low fixed incomes are using their credit cards and taking out short-term loans to fund their spending. 10

Inflation rose to over 3% at the end of 2017 leading to the Monetary Policy Committee increasing the base rate of interest by 0.25 percentage points to 0.5% in November 2017. Wage growth has been lagging behind price rises and this is expected to continue. Basic wage increases are expected to be only around 1%. This has heaped considerable pressure on households. 15

The ONS has updated the shopping basket that is used in the measurement of UK inflation, to reflect the lifestyle of households in the country. Technological advancements, changes in consumer tastes and a move towards health, fitness and gluten-free products have made it essential to revise the 2017 basket. 20

Extract B

Economic growth and living standards

Economic growth is expected to accelerate again as foreign demand for UK exports increases due to the global economic recovery. According to some economists, consumer spending is no longer the engine of growth for the UK. The increase in exports, which is largely due to the fall in the exchange rate of the pound, is expected to be the most significant driver of the UK's economic growth.

5

Some economists have proposed that the quality of economic growth needs to be measured and not just the quantity. This will allow governments to understand how GDP growth affects the living standards of its citizens. They want governments to publish data on the quality of life alongside GDP data as economic growth varies across the country with jobs and wages distributed unevenly. Economic growth figures also hide differences that are not considered in GDP calculations. In 2017, it was estimated that the relative size of the informal economy of developing countries was nearly five times greater than that of the UK.
